1900-Paint

Interior Walls: Primer with two coats of flat paint.
Choice of one color for all walls and all ceilings white
Interior Trim: Primer with two coats of semi-gloss paint.
Exterior Walls: Sealer / Primer with two coats of flat paint
Exterior Trim: Sealer / Primer with two coats of flat or semi gloss paint

Paint Note:

The use of any type of paint with a gloss appearance, which includes paints referred to as "egg-shell" will result in being able to see an unusual amount of drywall imperfections which occur naturally and are not detectable with flat paint. The intent to use any paint with a gloss finish will require the builder to be notified in advance of drywall installation. There will be an additional charge to the buyer for walls that will need special finishing to allow for the application of a gloss paint so normal imperfections will not be seen. Wide use of gloss paint is highly discouraged even with special drywall finishing techniques.

2000-Interior Trim

**These features are subject to change without notice and substitutions for comparable products are at builders discretion*

Please Note:

This is a custom home being built for the first time. During this course of construction the builder may have to deviate from the plans (layout or dimensions) or specifications to solve design implementation problems in the field. Some wording may be used on the plan to describe a visual effect and should not be taken literally, for example, the word stone for a polystyrene look alike product. Some wording and diagrams on the plan may be suggested design ideas by the designer and not intended to be included in the contract. The specifications will be used as the final determinate.
